Title **Oral Medicine in 2011: What's Hot and what's not!**

Dentistry is a dynamic profession that demands its practitioners be both competent and contemporary. The discipline of oral medicine embraces all aspects of clinical dentistry and like its related oral health disciplines, is inundated daily with new diseases, new techniques and new therapies. This course is designed to update members of the dental team on the more common and significant diseases and conditions that can be expected to occur in a modern dental practice. Emphasis will be placed on the clinical recognition, diagnosis, and management of those entities.

CE credits: 6 hours. Certificate of attendance awarded at conclusion of course.
Attendees are responsible for keeping record of attendance.

Last Chance CE: Sept 30, 2011 is last day to earn credits toward WI State Licensure for 2009-2011 cycle for DDS/RDH
